

Sand Idea

Gameplay:

- The board is a grid of hollow containers in different sizes and shapes, each assigned a color.
- Above the board sits a pixel-art picture built entirely from colored sand.
- Hold and drag a container until it sits under pixels of its own color; the sand pours down and its fill percentage rises, eroding the picture.
- A container reaching 100% is sealed and removed, freeing space for the others.

Key Distinction:

- Movement itself is the puzzle - every container is both a piece to fill and an obstacle blocking the others.
- Sequencing which one reaches its color first is where the difficulty lives.
- The satisfying flow of granular sand pouring down, paired with a collection of vibrant pixel-art pictures, gives each level a tactile, visually rewarding payoff.

Goal:

- Fill every container to 100% with its matching sand before the timer expires.

Fail:

- Timer runs out or no container can reach matching sand, with a continue offered for extra time or a booster.

Control:

Hold and Drag
